

Completing the School Funding Puzzle

FY27 Budget Priority: Addressing the Funding Gap in Mandated Categorical Programs

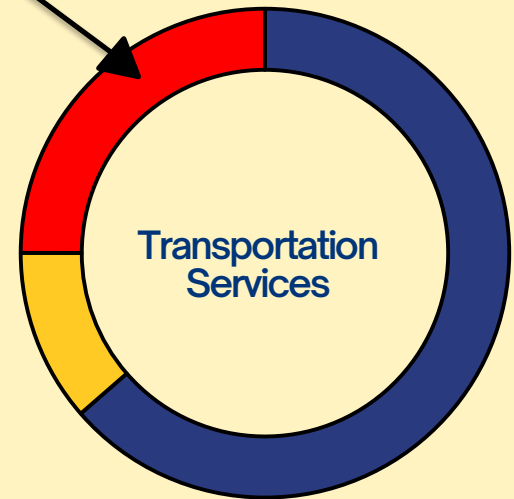

Every day, **Paris Union School District 95** transports **480** students to and from school, at an annual cost of **\$633,965**. The state reimburses only **\$530,810**, leaving a gap that the district must cover with local resources. In addition, **21** students receive special education transportation, which costs **\$39,733** annually. The state reimbursement covers only **\$25,415**, leaving another significant shortfall. Together, these under-reimbursements create a funding gap of **\$142,528** each year—dollars that could otherwise support classrooms, teachers, and student opportunities.

How Proration Has Impacted Paris Union School District 95

Impact to Students

Our District launched our own transportation department this year, and we are seeing that students who previously were late to school or even absent are now in school with their peers, able to learn.

Impact to Taxpayers

Over the past five years, there has been a gap of almost \$324,000 between the cost of transportation and the revenue provided by state and local sources. The District has been forced to shift funding from instructional uses to cover the shortfall in state reimbursement support.

Our Requests

Increase state funding for transportation and special education reimbursements to keep pace with actual district costs.

Protect Illinois' investment in Evidence-Based Funding (EBF) while addressing these growing shortfalls.
